TO: Service Champ Customers
SUBJECT: Service Champ Upgrades Transmission Pan Gaskets
DATE: October 4, 2006

Between now and the end of the year, Service Champ will be transitioning to **FEL-PRO PERFORMANCE GASKETS** in our transmission filter kits.

This is the **newest technology** in sealing and offers many benefits for both and your customers;

- A fiber core gasket material with a proprietary rubber coating is leak resistance and provides **extended performance** on the vehicle.
- Gasket lies flat and holds its shape, resulting in the same **easy positioning** of the gasket prior to installation you've been accustomed to.
- Features exclusive *Hole Lock* design allowing **faster & easier pan installation**. *Hole Lock* allows the installer to "hold" selected fasteners in place as the pan assembly is reinstalled on the transmission. *Hole Lock* can be found at each corner section of the gasket.
- Highly conformable, will seal over a wide range of surface conditions, with **improved forgiveness** of minor flatness and surface imperfections.
- Lastly, no additional sealants are required; **easier clean up** for repeat repair occasions; will not stick to castings; maintains positive contact pressure between flanges to create a long lasting seal.

If you have any questions about our upgraded FEL-PRO PERFORMANCE GASKETS, please contact your Service Champ representative.
